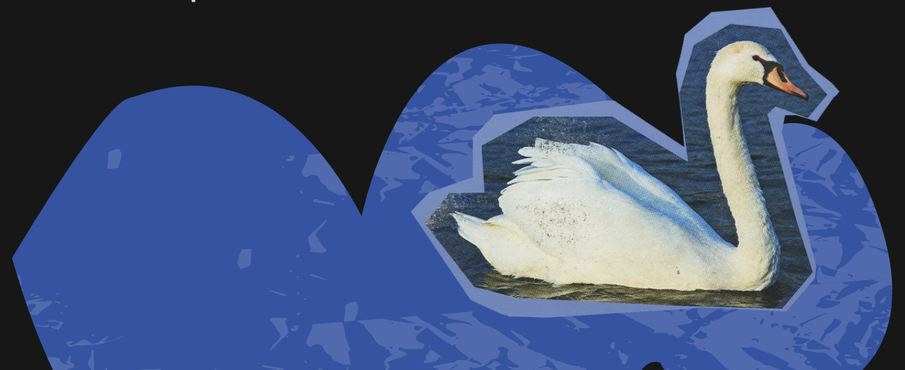
CAMPUS NATURE ART TRAIL

transforming DLSU campus into a vibrant, eco-conscious art space

Group 3

PROJECT DESCRIPTION

The Campus Nature Art Trail aims to transform DLSU into a vibrant, eco-conscious art space by placing mini, nature-inspired installations across the campus. Each piece will be created by the DLSU community using sustainable and recycled materials, reflecting themes of environmental awareness and creative expression.



These installations will highlight themes such as biodiversity and climate action, encouraging students and visitors to explore the campus with fresh eyes. Aside from enhancing the natural beauty of the campus, the project seeks to spark conversations about sustainability, inspire environmental care, and provide an ongoing platform for creative expressions.

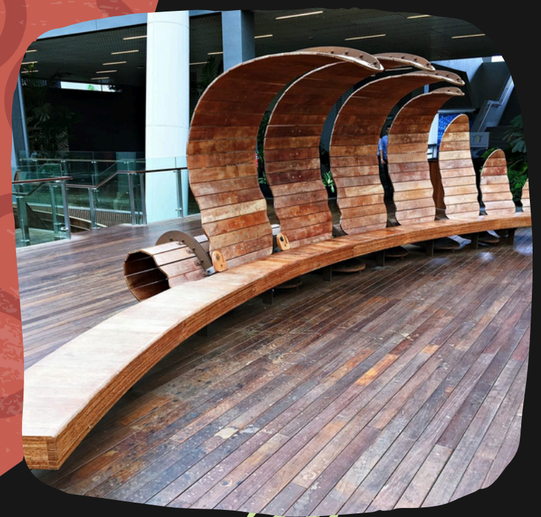
TARGET AUDIENCE

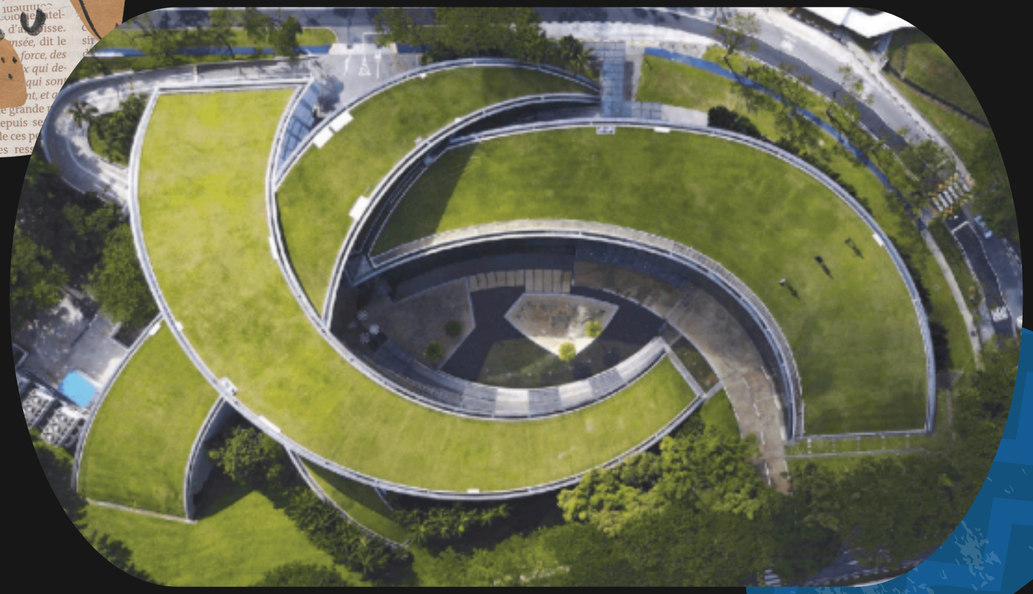
The primary target audience will be the students, faculty, staff, and visitors of De La Salle University.

The main objectives of this project are the following:

- To promote environmental awareness through sustainable art
- To provide a creative platform for students to showcase eco-themed works
- To enhance campus beauty and create new spaces for the community
- To foster a new culture of sustainability within the campus

RATIONALE





RELATED WORKS

In 2018, Nanyang Technological University of Singapore launched launched their own Campus Art Trail; a public art initiative showcasing multiple artworks across the university's main campus. It features a diverse collection of over 40 artworks, including sculptures, installations, and exhibits. The trail aims to integrate art into the university's environment and enhance the campus experience.

RELATED WORKS

An art installation located in Stanford University made to promote ocean conservation was prepared by sculptor Mark Baugh-Sasaki with life science teacher Mehr Kumar in 2024. One part of the installation involves 4 cylinders filled with seawater and iron fillings designed to rust throughout the year, representing the impact of man on the environment.

In 2025, a multi-disciplinary art project called “Anthroposcene” was conducted at University of the Philippines Diliman, College of Fine Arts. This exhibition represents a desolate landscape, indicative of the end of the Anthropocene era, the current era, in which humanity was the primary force of change, particularly environmental change. This dusty, barren wasteland is commentary on human-induced climate change.

METHODOLOGY

Step 1.
The project heads will coordinate with the relevant DLSU offices to plan and get the necessary clearance to approve the installation sites, ensuring artworks do not damage existing greenery or obstruct pathways. Student volunteers, environmental organizations, and art organizations on campus will also be invited to participate.

Step 2.
A design workshop will be conducted for participants, focusing on sustainable art practices and creative use of locally available materials. Topics will include using reclaimed wood, bamboo, scrap fabric, recycled plastic bottles, tin cans, and stones; items commonly found in Manila and easily sourced through donation drives.

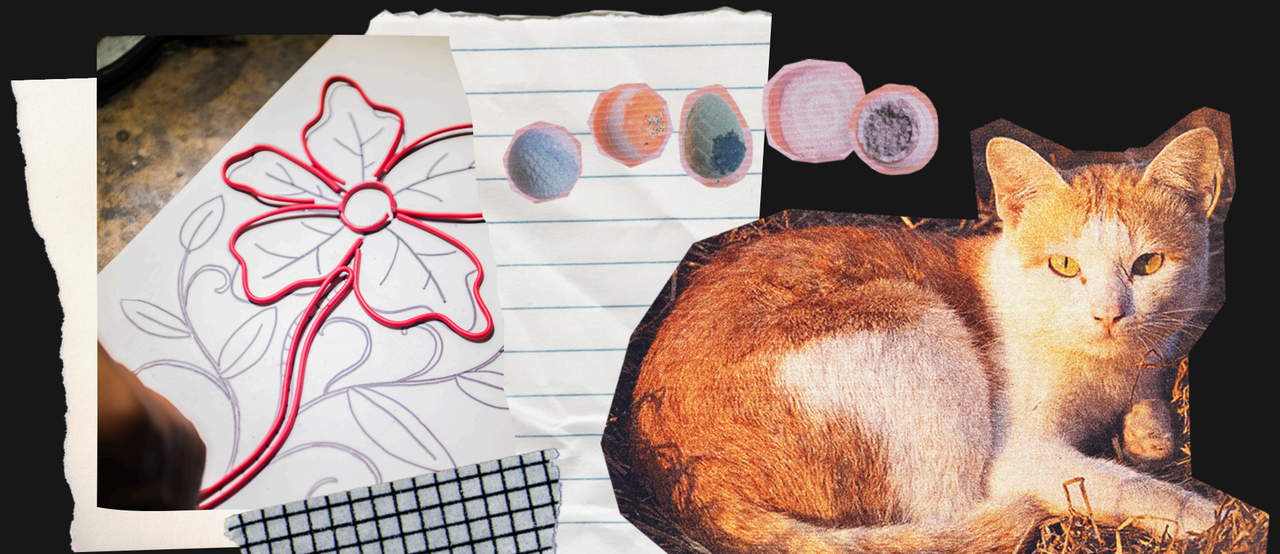
Step 3.
Materials will be gathered through campus-wide collection efforts and partnerships with nearby junk shops, construction sites, and households. Donations will include everyday discarded items such as cardboard, old jars, coconut shells, fabric scraps, and bottle caps, ensuring everything is safe for outdoor display.

Step 4.
Students will create their nature-inspired artworks within one week in designated campus work areas. Faculty mentors and sustainability advocates will guide the process to ensure the designs align with environmental and artistic goals.

Step 5.
The complete artworks will be installed along the Campus Nature Art Trail, covering selected spots such as the Cory Aquino Democratic Space, Henry Sy Sr. Hall Grounds, and St. Joseph Hall Walkway. Each piece will include a small sign or QR code sharing its concept, materials used, and environmental message.

Step 6.
The project will launch with a guided art trail tour for students, faculty, and visitors. Photos will be posted on DLSU's official social media platforms to showcase the installations and promote sustainability on campus.

Step 7.
At the end of the display period, the project team will assess the artworks' condition and collect feedback from the community. Plans will be made for future editions of the trail, possibly linking it to annual campus events like Earth Day or Green Month.



SAMPLE PRODUCTION SCHEDULE

Week 1-2: Initiate planning with DLSU staff and interested parties and organizations; Prepare and submit required documents and permits for the project

Week 3: Conduct seminar on sustainable art practices

Week 4: Conduct donation drive and form partnerships for sustainable materials for use in artworks

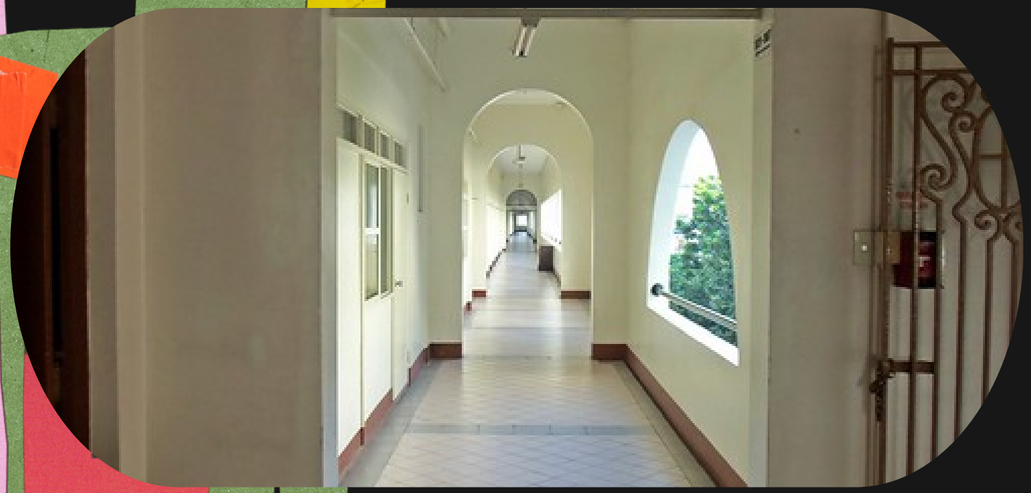
Week 5: Create artworks and installations

Week 6: Install artworks in the designated areas; Conduct guided tour of art trail

Week 7: Assess and evaluate program goals for future projects

VENUE

The activity will be done onsite at De La Salle University. The installations will be placed in high foot-traffic areas such as the Henry Sy Sr. Hall Grounds, Cory Aquino Democratic Space, and St. Joseph Hall Walkway.



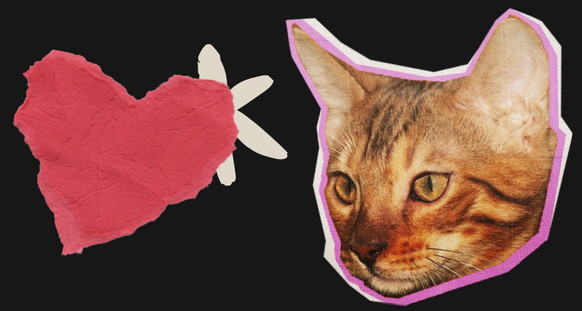
FUTURE OF THE PROJECT

Environmental Education and Campus Culture

The trail can become a long-term feature of DLSU's green initiatives, fostering environmental care and awareness among new batches of students each year. By integrating QR codes and interactive features, the project can serve as an active classroom where art, nature, and environmental science intersect. This approach can promote biodiversity awareness and inspire other student-led sustainability projects.

The Project as a Whole

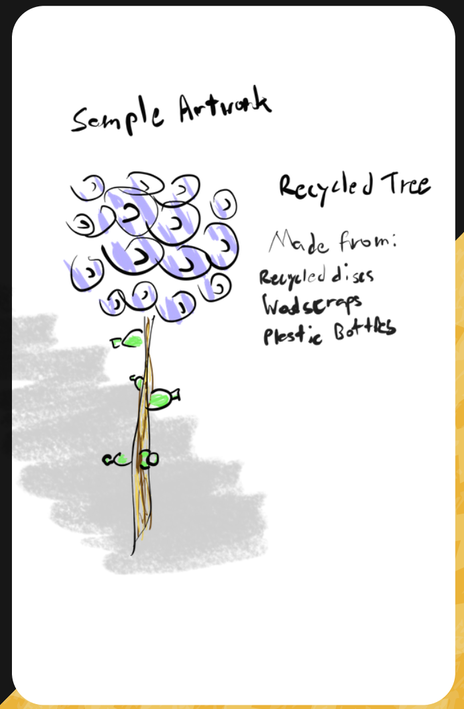
If the project gains traction, it could expand to other campuses within in the DLSU system or partner universities in the Philippines. Annual editions could be held during Earth Day or Sustainability Month, with new themes and installation sites each year. Over time, the Campus Nature Art Trail can evolve into a signature DLSU event, enhancing both the aesthetic and environmental value of the campus while strengthening community engagement.



PROPOSED OUTPUT

Art Installations must exhibit the following attributes:

- made with sustainable materials
- designed to promote sustainable practices and environmental care



Campus Nature Art Trail
Art Pitch | Term 3 A.Y. 24-25
